

## PRESS RELEASE

# BioLEGO – A web-based application for biorefinery design and evaluation of serial biomass fermentation

The composition of feedstock biomass and the selection of fermenting microorganisms are critical factors in biorefinery design. Once biomass feedstock is identified, depending on local conditions, biorefinery designers need to select optimal fermenting organisms. Using organism communities has theoretical advantages but also leads to problems in the context of species competition, process design and modelling, in turn resulting in insufficient process control. This study presents the optimization control that is possible when using a serial fermentation approach. Using one organism after the other — in serial fermentation, rather than in a community configuration allows maximal process control, while benefiting from organism diversity to maximize feedstock conversion rates. This study introduces a freely available web-based application, BioLEGO, which provides access to computer-assisted single and two-step multiorganism fermentation process design. BioLEGO also supports the evaluation of possible biomass-to-product yields for biomass mixes or general media and recommends media changes to increase the process efficacy. BioLEGO is accessible via a simple and intuitive user interface.

*Two single computer-model modules are used by BioLEGO to characterize a two-step/two-organism fermentation process. Any two building blocks can be used, assuming they are represented in compatible model formats. The application will support more organisms over time and will also allow the exploration of genetic changes.*

BioLEGO web-based application is a living on-going project developed in Computer Science Department of Technion — Israel Institute of Technology. Authors with senior contributions for this manuscript are Dr. Zohar Yakhini representing both Computer Science Department of Technion — Israel Institute of Technology and Agilent Laboratories, and Dr. Alexander Golberg from Porter School of Environmental Studies in Tel Aviv University, Israel.

**Corresponding author for this study in TECHNOLOGY is Mr. Edward Vitkin, [edward.vitkin@gmail.com](mailto:edward.vitkin@gmail.com)**

## **About TECHNOLOGY**

Fashioned as a high-impact, high-visibility, top-echelon publication, this new ground-breaking journal — TECHNOLOGY — will feature the development of cutting-edge new technologies in a broad array of emerging fields of science and engineering. The content will have an applied science and technological slant with a focus on both innovation and application to daily lives. It will cover diverse disciplines such as health and life science, energy and environment, advanced materials, technology-based manufacturing, information science and technology, and marine and transportations technologies.

## **About World Scientific Publishing Co.**

World Scientific Publishing is a leading independent publisher of books and journals for the scholarly, research and professional communities. The company publishes about 500 books annually and more than 120 journals in various fields. World Scientific collaborates with prestigious organisations like the Nobel Foundation, US National Academies Press, as well as its subsidiary, the Imperial College Press, amongst others, to bring high quality academic and professional content to researchers and academics worldwide. To find out more about World Scientific, please visit [www.worldscientific.com](http://www.worldscientific.com).
